PROJECTS

WEATHER-SMS

Weather-SMS enables users to check forecast for any location via text messages after they register with valid phone number. Built for people that need to know weather conditions when no internet connection is available. On the site available forecasts are 5 day, 10 day, hourly 2 day and hourly 10 day. There is an option to check weather history, up to 30 years back for some locations. Registered users can check their search history on the profile page. Stretch goal is an earthquake, tsunami and severe weather SMS early notification system utilizing Satori API. Built in Ruby, Sinatra and JavaScript. Uses WU and Twilio API.
